Protipula unites poorly understood group of species in Architipulinae. This is caused by a limited amount of available material, which makes it difficult to verify already described taxa. In this paper we re-examined the type species of *Protipula*, *Protipula crassa*, from the lower Toarcian of Dobbertin (Germany). We also described a new species, *Protipula oosterbroeki* Krzemiński, Kopeć, & Ansorge sp. nov., from the Upper Jurassic of Karatau in Kazakhstan. Furthermore, we reassessed the holotype of *Architipula areolata* from Dobbertin and subsequently transferred it to *Protipula*. New evidence suggests that the genus *Protipula*, and the subfamily Architipulinae, were more diverse and had a wider distribution in Laurasia than previously thought.

Key words: Insecta, Tipulomorpha, Toarcian, Jurassic, Dobbertin, Grimmen, Karatau
