

## **On a new pygasterid (Echinoidea) from the Jurassic (Middle Lias) of Nevada, U.S.A.**

Wanda Jesionek-Szymańska

*Acta Palaeontologica Polonica* 15 (4), 1970: 411-419

*Plesiechinus hawkinsi* n. sp. from the Middle Lias of Nevada, U.S.A., the oldest and most primitive representative of an irregular echinoid family of the Pygasteridae Lambert, 1900, displays a "regular" apical system with genital 5 perforate. Crenulate tubercles in the new species contest earlier opinions on the derivation of pygasterids from echinoids with smooth tubercles.
