

Taxonomy, nomenclature, and evolution of the early schubertellid fusulinids

Vladimir I. Davydov

Acta Palaeontologica Polonica 56 (1), 2011: 181-194 doi: <http://dx.doi.org/10.4202/app.2010.0026>

The types of the species belonging to the fusulinid genera *Schubertella* and *Eoschubertella* were examined from publications and type collections. *Eoschubertella* in general possesses all the features of *Schubertella* and therefore is a junior synonym of the latter. However, the concept of *Eoschubertella* best describes the genus *Schubertina* with its type species *Schubertina curculi*. *Schubertina* is closely related to the newly established genus *Grovesella* the concept of which is emended in this paper. Besides *Schubertella*, *Schubertina*, and *Grovesella*, the genera *Mesoschubertella*, *Biwaella* are reviewed and three new species, *Grovesella nevadensis*, *Biwaella zhikalyaki*, and *Biwaella poletaevi*, are described. The phylogenetic relationships of all Pennsylvanian–Cisuralian schubertellids are also proposed. Barrel-shaped *Grovesella* suggested being the very first schubertellid that appears sometimes in the middle–late Bashkirian time. In late Bashkirian it is then developed into ovoid to fusiform *Schubertina*. The latter genus gave rise into *Schubertella* in early Moscovian. First *Fusiella* derived from *Schubertella* in late Moscovian, *Biwaella*—in early Gzhelian and *Boultonia*—in late Gzhelian time. Genus *Mesoschubertella* also developed from *Schubertella* at least in Artinskian, but may be in late Sakmarian.

Key words: Foraminifera, Fusulinida, Schubertellidae, evolution, taxonomy, Permian, Carboniferous.
