

## A termite from the Late Oligocene of northern Ethiopia

Michael S. Engel, Aaron D. Pan, and Bonnie F. Jacobs

*Acta Palaeontologica Polonica* 58 (2), 2013: 331-334 doi: <http://dx.doi.org/10.4202/app.2011.0198>

Termites of the family Stolotermitidae are a relict lineage of primitive Isoptera. The fossil record of Stolotermitidae is exceptionally poor, with only two Miocene (Neogene) species documented to date. Herein, a new genus and species of Paleogene termites is described and figured from the Late Oligocene (28–27 Ma, Early Chattian) of northwestern Ethiopia (Amhara Region, Chilga Woreda). *Chilgatermes diamatensis* gen. et sp. nov., is most similar to genera of the Stolotermitidae, Archotermopsidae, and Termopsidae but can be distinguished on the basis of forewing venational details. The genus is tentatively placed in the Stolotermitidae: Porotermitinae. *Chilgatermes diamatensis* is the first fossil termite from Ethiopia and, indeed, the first from the entire African continent.
