

## **A new oviraptorosaur (Dinosauria, Theropoda) from Mongolia: The first dinosaur with a pygostyle**

Rinchen Barsbold, Halszka Osmólska, Mahito Watabe, Philip J. Currie, and Khishigjaw Tsogtbaatar  
*Acta Palaeontologica Polonica* 45 (2), 2000: 97-106

A description of *Nomingia gobiensis* gen. et sp. n., the first known dinosaur with a pygostyle, the structure known so far only in birds, is presented. The specimen comes from the Late Cretaceous strata at Bugin Tsav, Trans-Altai Gobi, Mongolia. *N. gobiensis* is assigned within the Oviraptorosauria based on the following characters: pneumatized caudal vertebrae, posteriorly concave ischium, and deep cervicodorsal hypapophyses. This specimen has been previously partially described without being formally named (Barsbold et al. 2000).

**Key words:** Dinosauria, Theropoda, Oviraptorosauria, Late Cretaceous, Gobi Desert, Mongolia.
