

## **New data on *Paenelimnoecus* from the middle Miocene of Spain support the shrew subfamily Allosoricinae**

Lars W. van den Hoek Ostende, Marc Furió, and Israel García-Paredes

*Acta Palaeontologica Polonica* 54 (1), 2009: 159-164 doi:<http://dx.doi.org/10.4202/app.2009.0117>

*Limnoecus truyolsi* was long considered an enigmatic shrew. Additional material from the Calatayud–Montalbán Basin (Spain) shows it to be referable to the genus *Paenelimnoecus*. The species represents an intermediate form between *P. micromorphus* and *P. crouzeli*. This lineage confirms the separate development of the “soricine” p4, and thus supports the Allosoricinae as a separate subfamily.
