

Inarticulate brachiopods from the Lower Ordovician of the Holy Cross Mountains, Poland

Wieslaw Bednarczyk and Gertruda Biernat *Acta Palaeontologica Polonica* 23 (3), 1978: 293-316

Two inarticulate brachiopod assemblages are recognized in the Lower Ordovician of the Holy Cross Mountains, Poland, as characteristic of the local *Lingulella zejszneri* and *Acontiodus rectus sulcatus* zones. They occur with conodonts typical of the Scandinavian *Paltodus deltifer* and *Baltoniodus navis* + *Baltoniodus triangularis* Zones. One new genus (*Quasithambonia*) and five new brachiopod species: *Rowellella distincta, Quasithambonia rarispinosa, Spondylotreta maior, Scaphelasma bukowkense, Eoconulus dyminensis* are established from the *Acontiodus rectus sulcatus*

zone.
