

Late Tortonian bryozoans from Mut Basin, Central Anatolian Plateau, southern Turkey

Kamil Zágoršek and Dennis P. Gordon *Acta Palaeontologica Polonica* 58 (3), 2012: 595-607 doi: http://dx.doi.org/10.4202/app.2011.0100

Sixteen bryozoan species have been identified in the Başyayla section, Mut Basin, southern Turkey. Five of these species are described here, including two new to science representing new genera: *Basyaylella elsae* gen. et sp. nov. and *Ostrovskia triforamina* gen. et sp. nov. The other three described species (*Exidmonea* sp., *Biflustra savartii*, and *Margaretta* sp.) show unusual features that have not been reported previously. Based on bryozoan data, the Başyayla sequence represents a tropical to subtropical, normal marine environment, with seafloor composed of fine sedimentary particles in a low–energy setting.

Key words: Bryozoa, Cheilostomata, *Basyaylella, Ostrovskia*, Tortonian, Eocene, Miocene, Mut Basin, Turkey.
