

First lambeosaurine dinosaur from the Nemegt Formation, Mongolia

Teresa Maryńska and Halszka Osmólska

Acta Palaeontologica Polonica 26 (3-4), 1981: 243-255

The new genus and species *Barsboldia sicinskii* is here erected, based on an incomplete postcranial skeleton found in the Upper Cretaceous Nemegt Formation at the Nemegt locality, Gobi Desert, Mongolian People's Republic. It is the first lambeosaurine dinosaur so far described from this formation. The most striking character of *B. sicinskii* is the long club-like neural spines on the anterior caudals.

Key words: Dinosauria, Ornithischia, Hadrosauridae, Lambeosaurinae, anatomy, Upper Cretaceous, Mongolia.
