

Palynological analysis of Lower Cretaceous sediments from Kujawy (Poland)

Marta Waksmundzka

Acta Palaeontologica Polonica 26 (3-4), 1981: 257-280

Age of the Lower Cretaceous sediments from Kujawy has been determined as Aptian on the basis of spores and pollen. Thirty forms of spores and pollen have been described. They represent the following genera: *Cyathidites*, *Stereisporites*, *Deltoidospora*, *Gleichenidiites*, *Clavifera*, *Ornamentifera*, *Baculatisporites*, *Uvaesporites*, *Trilites*, *Concavissimisporites*, *Trilobosporites*, *Lycopodiumsporites*, *Pinuspollenites*, *Vitreisporites*, *Podocarpites*, *Eucommiidites*, *Clavatipollenites*, *Sciadopityspollenites*.

Key words: spores, pollen, stratigraphy, taxonomy, Poland.
