

Veliger morphs in *Pristiograptus*, a robust graptoloid from the Ludlow series (Silurian) of Morocco

Barrie Rickards

Acta Palaeontologica Polonica 46 (3), 2001: 447-451

The velum of veliger morphs is a rare, impersistent, delicate structure developed on the thecal apertures of some graptolites, and which may become stabilised in evolutionary descendants, thereby producing a new morphotype. This paper describes their discovery for the first time in the genus *Pristiograptus*.
